View The Video. Some investigators have posited that energy balance remains central to obesity and that addiction or related aspects may represent a relatively minor component. Specifically, given the relative abundance and availability of inexpensive foods, it is possible that motivations to consume highly palatable foods, and perhaps large portions thereof, have taken a larger role in contributing to eating behaviors than in years past when the motivation to eat may have been more closely linked to energy restoration. Thus, examining other addiction-related constructs, such as food craving, as they relate to obesity and other food-related conditions seems relevant.
